

Hewlett-Packard, Blackburn, Victoria.

Austin-Anderson designs and constructs electronics and computer centre for Hewlett-Packard.

Hewlett-Packard Australia Pty. Ltd., the Australian subsidiary of one of the international leaders in electronics and computers, required additional facilities to

support their rapidly expanding Australian operations.

The decision was made to develop a new electronics and computer centre to accommodate a combined administration, marketing, systems integration, demonstration rooms, operator training and service departments on a new site in the Melbourne area. Austin-Anderson was commissioned to assist in site evaluation, preliminary planning and budgeting and to design, engineer and construct the new facility, including interior design and landscaping.

The facility — a 50,000 sq ft two-storey building with parking for 200 cars — was planned and completed in less than 12 months, on time and within budget.

Austin-Anderson provides a systems approach to solving facility problems, integrating a full range of consulting, design, engineering and construction services with undivided responsibility for design, procurement and construction.

When you are faced with decisions involving physical facilities, contact Austin-Anderson.
